GMS Guardrail System: 
Saves money with fewer posts and it’s NCHRP-350 and MASH* approved

Predictable and consistent release from strong post every time! Release is the key to improved performance of W-beam guardrail barrier systems.

*Manual for Assessing Safety Hardware

In addition to many safety advantages, the GMS (Gregory Mini Spacer) system eliminates the need for offset blocks and can be used with 12’6”, 6’3” or 3’1-1/2” post spacings at mounting heights of 27-5/8” to 31”. The system can be attached to transitions and end treatments of the same height. Uses all standard guardrail components.

THE REDUCED OFFSET GUARDRAIL SYSTEM FOR REDUCED BUDGETS!
