

NatureRail®

Scenic Guardrail System

Natural Wood Look – Safety of Steel

The NatureRail® Scenic Guardrail System is a steel-integrated timber product that offers a safe, aesthetic alternative to standard steel guardrail.

Perfect for scenic highways and park settings, additional safety options include Pedestrian and Equestrian Rails. Its unique design allows for easy installation. Galvanized steel parts and weather-resistant wood guarantee a long working life without maintenance.

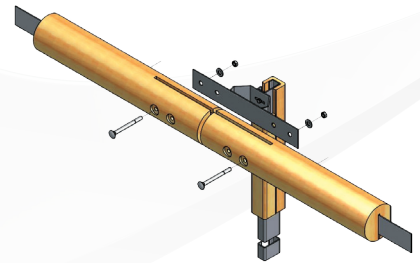

The Safe, Aesthetic Alternative

- NCHRP 350 TL-2 approved.
- NatureRail® is an aesthetic, steel-integrated timber guardrail system.
- Steel rails (5/8" thick) are wood clad with specially prepared, round wooden outer sections (6'6" long).
- All wood components are made of environmentally friendly Alkaline Copper Quaternary (ACQ) treated Norwegian Spruce lumber.
- Weather-resistant wood covers the front and back to protect the steel post.
- All steel components are hot-dip galvanized.
- Post spacing can be 3', 6' 6" or 13' to meet site requirements.
- Unique design with driveable posts makes for easy installation and in most cases does not require complicated boring or cutting.
- On average, 1250 linear feet of NatureRail® can be installed per day.
